Pinze per estrazione • Zahnzangen • Extracting forceps • Daviers

Pinze per estrazione

Strumenti appositamente disegnati per adattarsi al meglio a seconda del tipo di dente da estrarre, per cui come criterio guida suggeriamo di cercare di adattare quanto più possibile la forma delle due branche della pinza alla forma del dente o del colletto della radice che si vuole estrarre.

Zahnzangen

Instrumente, die beim Zahnziehen zum Einsatz kommen und so entwickelt sind, daß sie sich dem jeweiligen Zahntyp optimal anpassen. Es empfiehlt sich daher, immer jene Zange zu wählen, deren Branchenform sich am besten an den betreffenden Zahn bzw. den Wurzelhals, den man extrahieren will, anpaßt.

Extracting forceps

Extraction tools which are specially designed to adapt to the type of tooth being extracted. As a general guideline, we suggest trying to fit (as much as possible) the shape of the two jaws of the pliers to the shape of the tooth or to the neck of the root being extracted.

Daviers

Instruments utilisés pour les extractions de dents, ils sont dessinés spécialement pour s'adapter au mieux en fonction du type de dent à extraire ; nous conseillons donc d'essayer d'adapter le plus possible la forme des deux mâchoires de la pince à la forme de la dent ou du collet de la racine que l'on doit extraire.
